

NewsLetter

Vol 2; May 2023

What has been done?

All project partners have been working to set up local steering groups of active people in each partner country. As a result, within the framework of the project the steering group participants have been creating and sharing different environment-related stories with visual materials

To get a broader view of initiatives that aim to support environment-friendly lifestyle, the partnership collected examples of different best practices, which have proven to be successful in raising environmental awareness

Some of the Green Future stories..

Story about protecting a bush (Lithuania)

As a result of community efforts, the bush near to a construction site was saved from uprooting. The actors worked incognito for the sake of the Chirping Bush. The story of the Chirping Bush reveals how a small act of one person can start awareness and activity in the community.

Story about reforestation (Latvia)

Self-planted forest in Madona. Crops used to grow in the visible areas. In the past, there was an uncultivated field overgrown with alder trees. Ten years ago the owner of the forest planted fir trees, and now there is a beautiful new growth forest.

Some of the Green Future stories..

Arlanda Airport best practices (Sweden)

Swedavia that owns and operates Stockholm Arlanda Airport has always prioritised its work with environmental issues. During recent years the emissions of fossil carbon dioxide at the airport was cut more than half over the past seven years. According to the airport web-site the airport's buildings are warmed up with district heating from biofuel, and all electricity purchased is produced from renewable sources, such as biofuel, solar, wind and hydropower. The use of environmentally more sustainable chemicals, glycol recovery and surface water treatment are examples of measures that reduce the environmental impact on water courses near the airport.

Partners meet in Riga

11–12 May 2023, Riga, Latvia – second face-to-face meeting of the partnership

During the meeting, partners from Lithuania (SIH), Latvia (Eurofortis) and Sweden (More Mosaic) presented the completed tasks, discussed the ongoing activities and defined the plans for the upcoming events. As of now, the partnership is focusing on fostering the dialogue between different generations by organising Intergenerational Green Future days in all partner countries between October 2023 and March 2024, and disseminating the project and sharing the collected materials with wider public.
